 - CLARITY
 - Visual Lifelogging Analysis
- BROWSING & SEARCHING SENSECAM DATA
- SENSECAM SUMMARISATION: THE NEXT GENERATION
- THE FUTURE

CLARITY: Centre for Sensor Web Technologies

- CSET (Centre for Science Engineering & Technology) funded by Science Foundation Ireland (SFI) with industry contributions
- 5 year duration, following on from previous 4-year “Adaptive Information Cluster”
- Administrative centre in UCD, researchers in DCU, UCD and Tyndall Institute, up to 100 researchers
- Within DCU involves CDVP (Computing & EE), NCSR (sensor people), Health & Human Performance (sports people)

CLARITY What ? “The Sensor Web”

- Increasing availability of cheap, robust, and deployable sensor technologies ushering in a wave of new information sources;
- Ubiquitous, dynamic, noisy, reactive and yielding unstructured data-streams == sensor web
- Realizing the sensor web demands a large-scale, multi-disciplinary research effort == CLARITY
- Moving beyond our research silos to novel research interactions;
- Demonstrator projects in:

**TennisSense (and other sports); Environmental monitoring;
Karbon footprinting; Ambient Assisted Living;**

Principal Investigators

Prof. Barry Smyth	- <i>Personalization, recommender systems, mobile computing</i>
Prof. Alan Smeaton	- <i>Content-based information retrieval</i>
Prof. Dermot Diamond	- <i>Materials research, wearable sensors</i>
Prof. Noel O'Connor	- <i>Audio-visual analysis, multi-modal information processing</i>
Mr. Gregory O'Hare	- <i>Ubiquitous computing, multi-agent systems</i>

Associate PIs

Prof. Paddy Nixon	- <i>Pervasive computing, middleware, security, trust, privacy</i>
Prof. Niall Moyna	- <i>Sports Science, wearable sensing</i>
Dr. Simon Dobson	- <i>Middleware, pervasive computing</i>
Dr. Cian O'Mathuna	- <i>Sensor devices, energy-aware hardware</i>
Dr. Brian Caulfield	- <i>Physiotherapy, therapeutic gaming, wearable sensors</i>

Funded Collaborators

Chris Bleakley (UCD), **Conor Brennan (DCU)**, Rem Collier (UCD), **Brian Corcoran (DCU)**, **Cathal Gurrin (DCU)**, Neil Hurley (UCD), Lorraine McGinty (UCD), **Kieran Moran (DCU)**, **Kieran Nolan (DCU)**, Brendan O'Flynn (TNI), **Donal O'Gorman (DCU)**, **Brett Paull (DCU)**, Emanuel Popovici (TNI), Aaron Quigley (UCD), **Mark Roantree (DCU)**

Lifelogging

Lifelogging is about digitally recording your daily life

Sometimes its for a reason

Work e.g. security personnel, medical staff, etc.

Personal e.g. diaries, etc.

Sometimes its for posterity

Recording vacations, family gatherings, social occasions

Sometimes its because we can

And we're not yet sure what we'll do with it e.g. MyLifeBits

Visual Lifelogging Devices

Much past research focus on miniaturising hardware and increasing battery-life + storage e.g. visual lifelogging domain

Steve Mann. Wearable computing: a first step toward personal imaging. *Computer*, 30:25–32, Feb 1997.

TIMELINE

Tano *et. al.* University of Electro-Communications, Tokyo, Japan

Microsoft Research SenseCam

SenseCam

SenseCam is a Microsoft Research Prototype

Multi-sensor device

Colour camera

3 accelerometers

Light meter

Passive infrared sensor

1GB flash memory storage

Smart image capture ~3 images/min

Since April 2006 we've had two SenseCams ... in 2007 we received 5 more

SenseCam images

Addenbrooke's: SenseCam Work

Preliminary Study carried out by Cambridge Memory Clinic,
Addenbrooke's Hospital

63 year old, well-educated married woman, with limbic
encephalitis (usually has no memory a few days after an
event)

Attends events along with her partner

Addenbrooke's: SenseCam Work

Microsoft Research Cambridge presentation: http://research.microsoft.com/~shodges/presentations/UBICOMP_senseCam.pdf

Addenbrooke's: SenseCam Work

Microsoft Research Cambridge presentation: http://research.microsoft.com/~shodges/presentations/UBICOMP_senseCam.pdf

Addenbrooke's: SenseCam Work

Microsoft Research Cambridge presentation: http://research.microsoft.com/~shodges/presentations/UBICOMP_senseCam.pdf

~4,000,000 SenseCam Images

- **One user wearing SC for over 3 years**
 - Each with GPS position!
 - Many other users too
- **Experiences:**
 - Most people don't notice camera
 - Those that do always remember!
 - Most people don't mind the camera
 - Have been spotted/greeted by people who have heard about the 'guy with the camera'

Millionth Image

Image Quality Analysis

- 40% of images are of low quality
- Many “boring” images of mundane tasks

Over last 3 years we’ve developed techniques for SenseCam data management, without having user input or direction ...

... so our work is technologically-driven rather than based on user pull ... let’s look at it !!

Overview

- OUR SENSECAM DATA COLLECTION
- **BROWSING & SEARCHING SENSECAM DATA**
 - **Event Segmentation/Searching/Interest/Augmentation**
 - **Browsing Application**
- SENSECAM SUMMARISATION: THE NEXT GENERATION
- THE FUTURE

Our Take...

To effectively provide memory retrieval cues using SENSECAM we need to automatically:

- *Group similar images into distinct “events”*
- *Suggest more “interesting/distinctive” events*
- *“Associate” related events*
- *Provide potentially additional retrieval cues from other sources*

Daily Browser Overview

EVENT SEGMENTATION

Using MOTION sensors – very quick & accurate

Visual Search Facilities

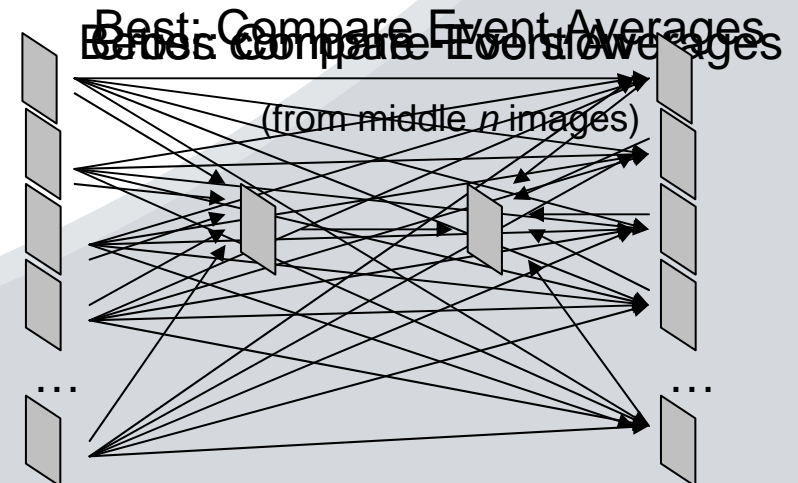

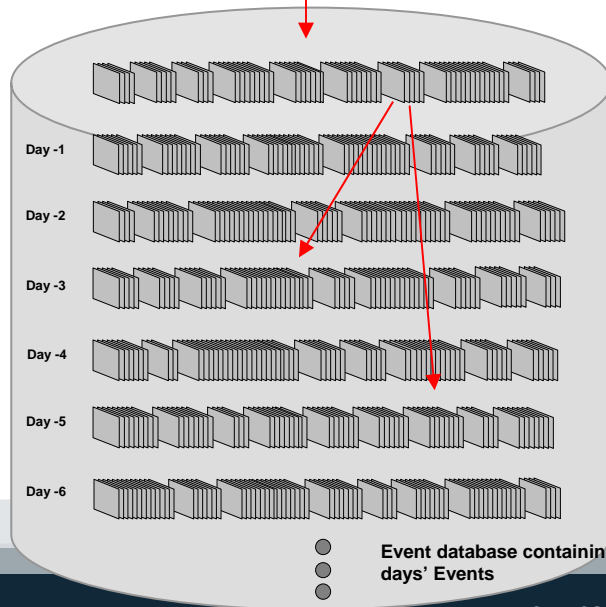

SenseCam Images of a day (about 3,000)

Event Segmentation

Event-Event Comparison within the Multi-day Event database

Selecting Event “Keyframe”

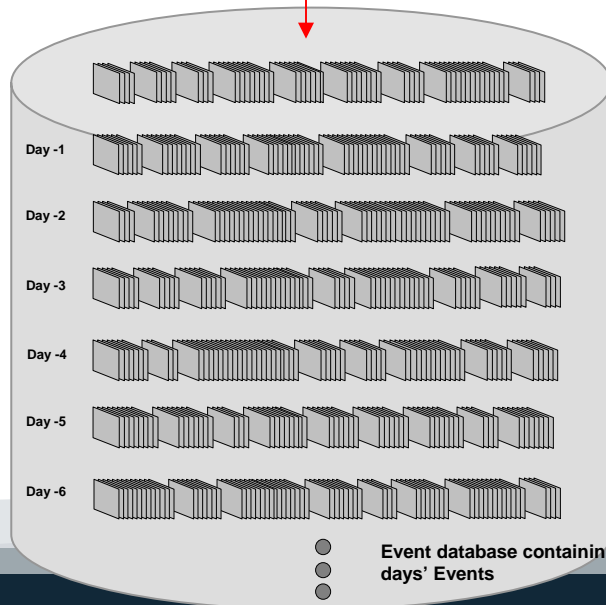

SenseCam Images of a day (about 3,000)

Event Segmentation

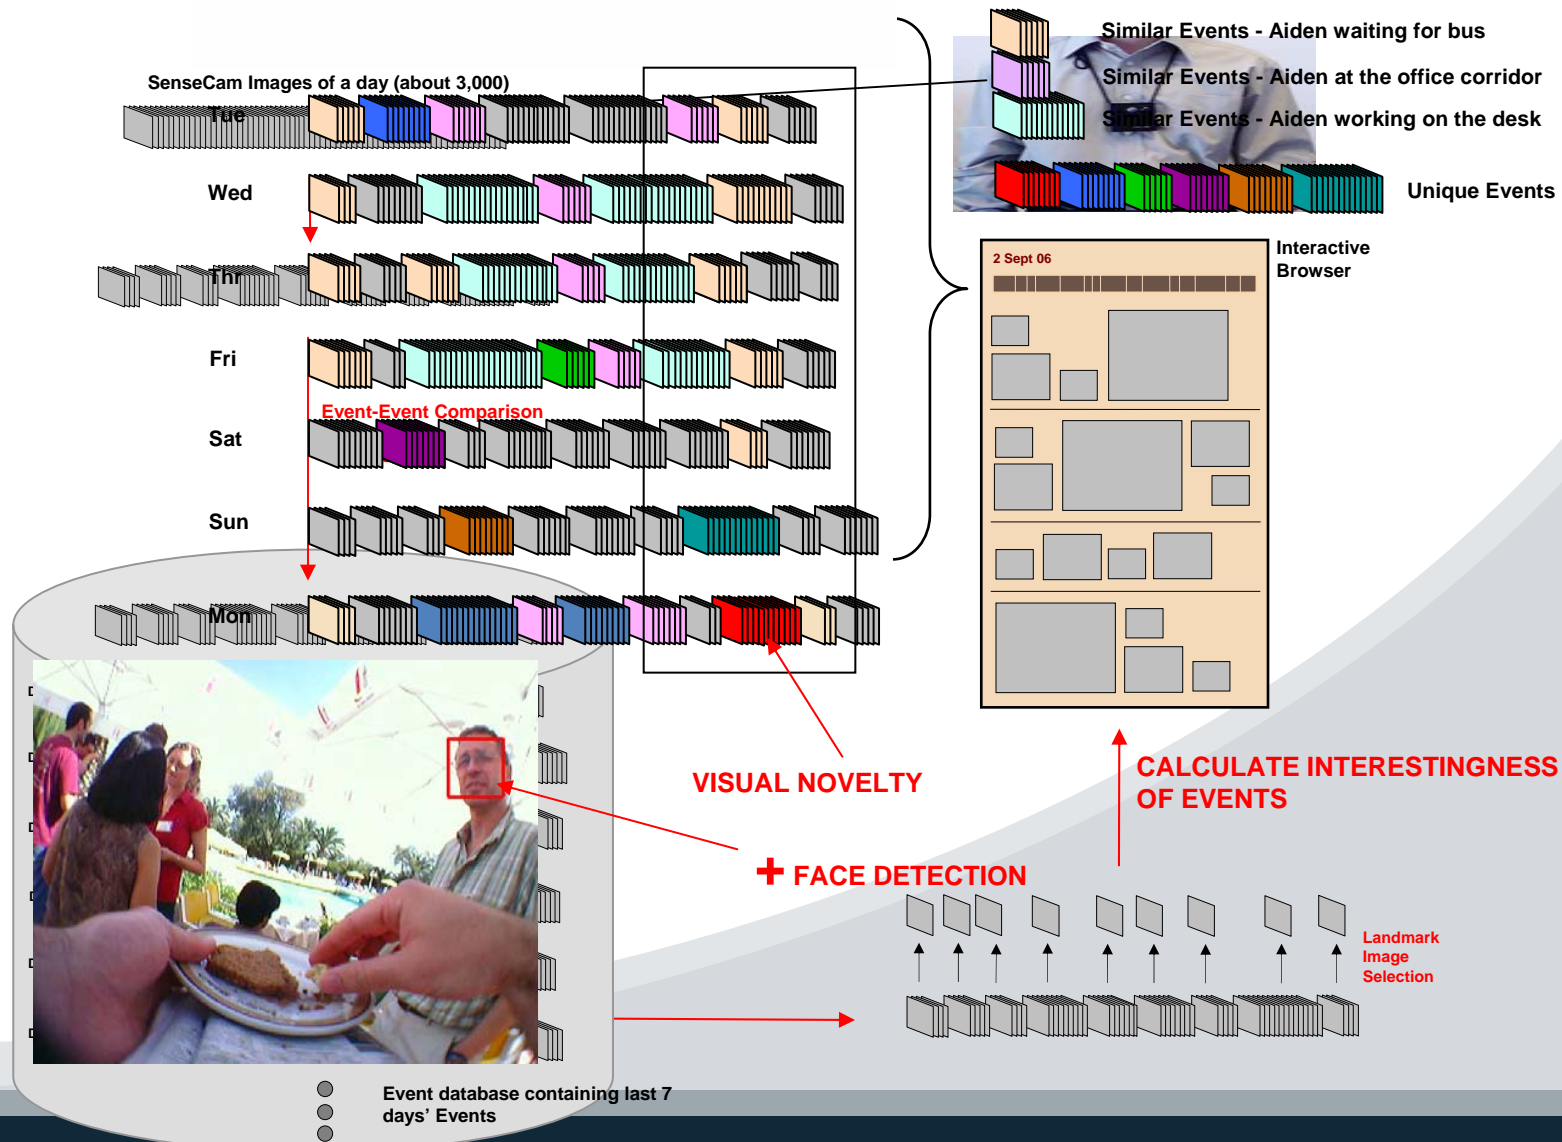

Event-Event Comparison
within the Multi-day Event
database

Best QUALITY
image around
MIDDLE of event

Suggest Interesting Events

Event augmentation

Here's a SenseCam picture of Aiden at a pier in Santa Barbara, CA.

If he has GPS he can search for other pictures in the same location...

Event augmentation – more cues

- He receives the following “geotagged” images...
- Then after some processing on text associated with these images we get many more images, and even YouTube videos at times too!

Event Augmentation

Does it work?

Yes – we have it operational from 6 image sources, tested and evaluated with users.

Bringing the threads together ... event segmentation, keyframe selection, event importance, event searching, and event augmentation ...

... we have a system to manage a lifelog

Comparison of Lifestyle Within Social Groups

Dietary habits

Consider using even only the “Eating” concept...

- Detect events where user is eating
- Allows us/family/dietitians gain more complete record of our eating habits

Choose a day in the calendar to get some advice!

You should not eat that much sweets, fats and oils. Use them sparingly!
Next time try to take less meat, fish, eggs or products in this group.
Don't forget a bigger amount of vegetables next time!

junio de 2006						
lun	mar	mié	jue	vie	sáb	dom
29	30	31	1	2	3	4
5	6	7	8	9	10	11

Breakfast: Milk is important for our bones, you started your day with a perfect amount of milk!!
You can take as cereals and bread as you want, and they are perfect at breakfast!!
Fruit and vegetables are good for your health. You introduced it in your breakfast, well done!!
Come on! leave the sweets and food from meat group for lunch, or for dinner!!
Lunch: Remember that you can always have some milk derived product as dessert!
Lunch with bread...perfect!!
Great amount of fruit for lunch!!
You can introduce some vegetables in your lunch!!
Meat, fish and eggs. Proteins for your body, good lunch amount!
Afternoon snack: Remember: afternoon snack has to be light. Try with a piece of fruit or some honey!
Dinner: Milk is important for our bones, you can take some milk derived product for Dinner!!
Dinner with bread...perfect!!

Advanced Image Matching

SURF feature are extracted

Each feature point casts a weighted vote for multiple database images

Votes are accumulated & the best match is found

Bi-directional Match Verification & re-ranking of Top results

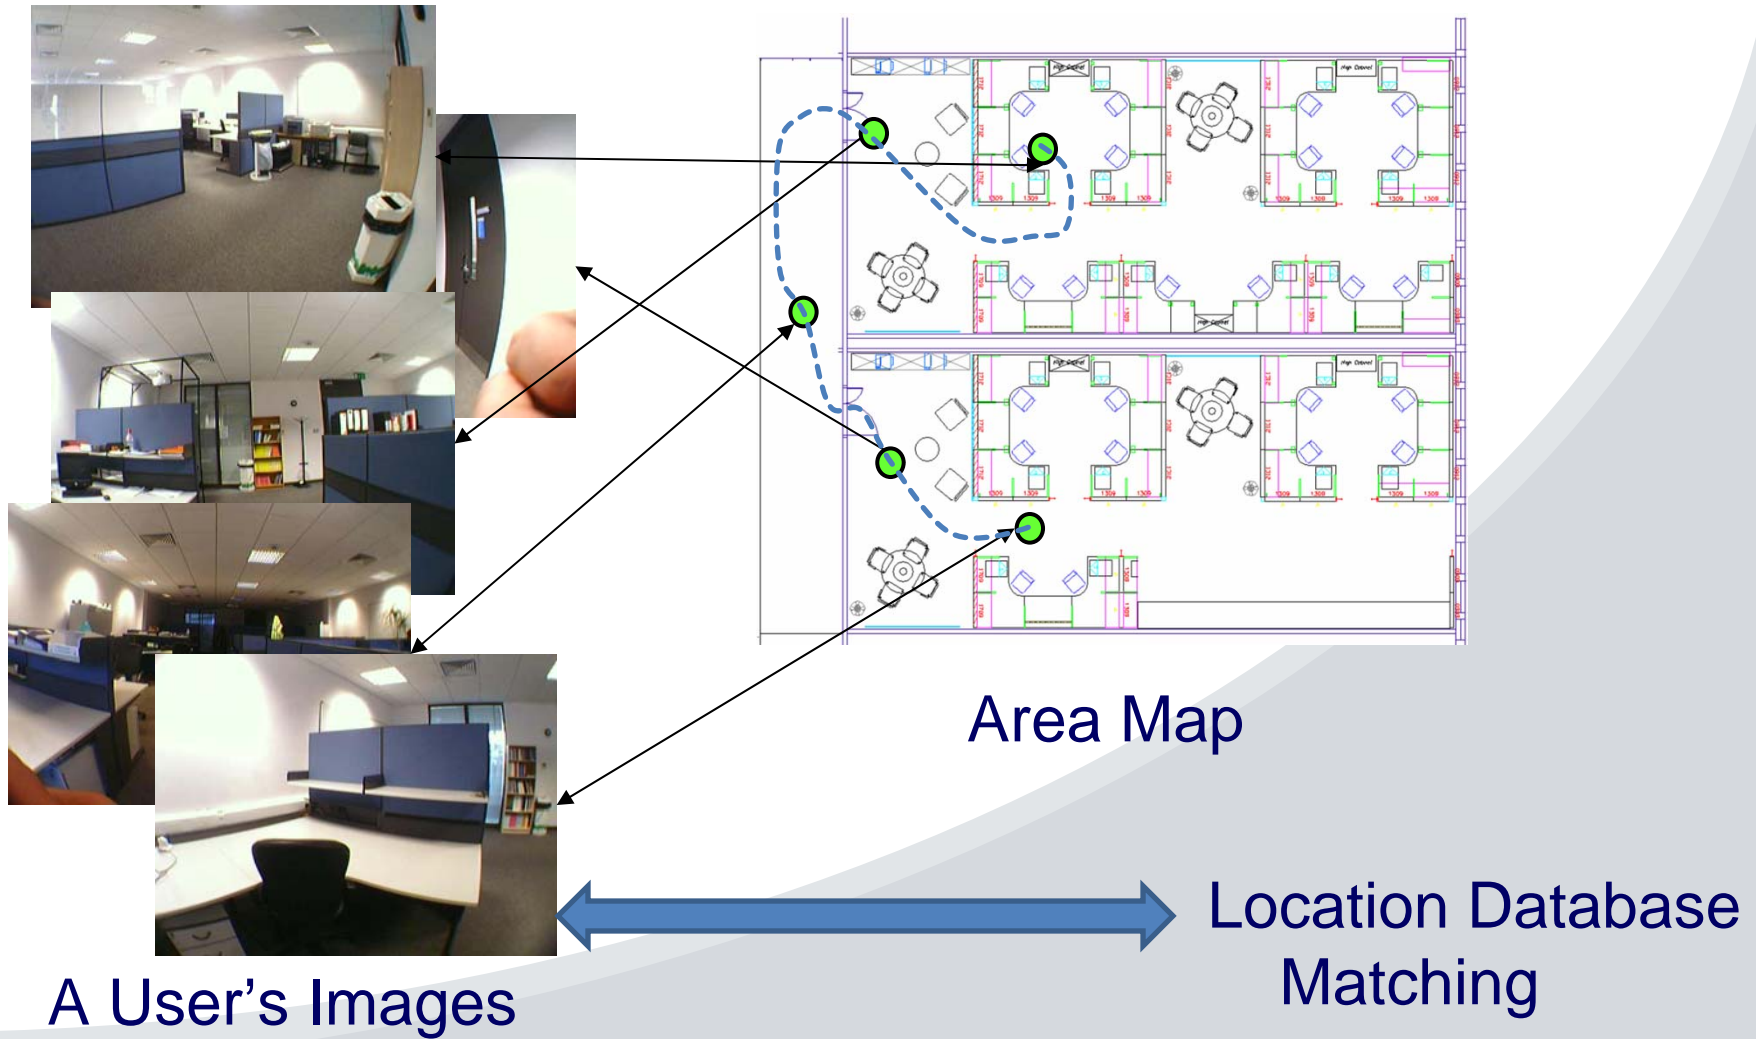

Setting Detection – Watching TV

Setting Detection – In the Park

Trajectory Estimation

Trajectory Estimation Results

Ground truth

Accuracy ~1.5 meters

Other Data Sources

SENSECAM: Images

GPS: Location

PC: E-mail, web pages visited, documents worked on

PHYSIOLOGICAL: Heart Rate, body temperature, breathing rate, sweat ph analysis

PHYSIOLOGICAL: Posture monitoring

BLUETOOTH: People around me + FAMILIARITY

Using Context in Personal Information Management

- Represent events as text documents, then “Google” them
- Search using keywords to find the desired target (e.g. pics of SenseCam event):
 - You may recall:
 - This document was for the *Conference X*.
 - I worked on it before meeting with *Professor A*.
 - It was a hot day
 - I was really tired
 - It was some restaurant in the city centre where we met

iCLIPS Browsing Interface

Present landmarks: real life events (Photos) and computer activities (Keywords and Thumbnails)

Refine searching by RECOGNIZING landmarks and Estimating the relevant Temporal distance from the Targets to the landmarks

Traditional Searching Panel also provide rich searching options:

- Keywords
- Target type
- Flexible time/date
- Geo-location
- People
- And more...

The screenshot displays the iCLIPS Browsing Interface, a software application for searching and organizing digital data. The interface is divided into several key sections:

- Traditional Searching Panel:** Located on the left, it includes fields for 'keywords', 'filetype' (set to 'documents'), and 'Date of accessing' (set to 11/26/2008). It also features a 'real life context' section with 'location' (Dublin) and 'people' (Ann).
- Timeline:** A horizontal axis at the top center shows a sequence of events and activities, including 'False Memory', 'sensecam', 'model', 'Autobiographical memory', 'Survey.xls', 'CIP', 'active window', 'Flex', 'prep', and 'Diary'. A 'Real Life Events' section on the right allows filtering by 'Photos', 'Calendar events', 'File Thumbnails', and 'Periodical Keywords'.
- Result Panel:** The main area on the right displays search results, including a 'More Info' window for 'FDIA' with a summary and authors (Yi CHEN). Other results include 'stimulating episodic with SenseCam.pdf', 'sv-lncs.dot', 'sv.doc', 'iiiX', 'Titlasde.doc', 'This survey explorer.doc', 'Yukicontextquestionair.xls', and 'typeinst_poster.doc'.

Overview

- OUR SENSECAM DATA COLLECTION
- BROWSING & SEARCHING SENSECAM DATA
- SENSECAM SUMMARISATION: THE NEXT GENERATION
- THE FUTURE
 - Storytelling
 - Energy Consumption
 - Designing for the Elderly
 - Summary

Lifelogs & Storytelling

Lifelogs offer huge opportunity for telling life stories.

The Need for Narrative:

1. Humans like stories - we tell them everyday
2. Lifelogs are complex & voluminous - we can't just present the material - we need to tame it somehow
3. Storyform communicates experience effectively & enables reflection and introspection

Lifelogs & Storytelling

Clear Challenges:

1. What components of a lifelog should be used in the composition of digital life stories and how should they be structured to enable retelling?
2. What information should be captured about the relationships between the various story elements in order to facilitate the reasoning required to build the end narrative?
3. How should an author be supported in the process of composing a life story and how should these stories be presented to their intended audience?

Classifying SC Motion Data

- Use accelerometer data to identify various states: sitting, walking, running, driving, on bus, on airplane
- Can estimate energy output
- Can estimate our “carbon footprint”
- This work is currently “early-stage”

Designing for Older Adults

Areas Affected by Ageing	Implications for Design
Cognitive Skills - Working Memory	Providing feedback to show what has been selected. Use combination of text and icons to support recall.
Sensory Skills - Vision and Hearing	Use of large images and text, large target areas for buttons and high colour contrast. Use of low frequency auditory signals.
Psychomotor skills	Use direct input devices (touch screen). Reduce scrolling.

CLARITY + U. Leeds

Martin Conway & Chris Moulin, Institute of Psychological Sciences, University Leeds

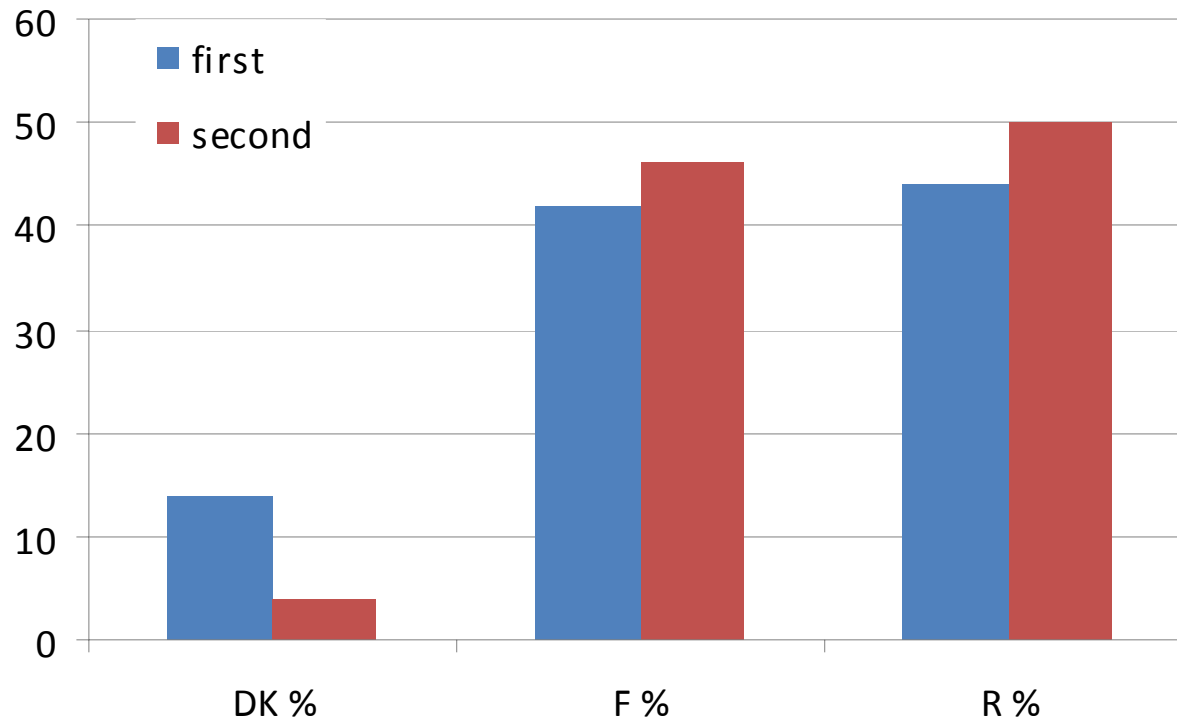

1 healthy subject -> 3 years of SenseCam images

How does SenseCam effect “normal” people?

Recollective experience as cued by SenseCam stills

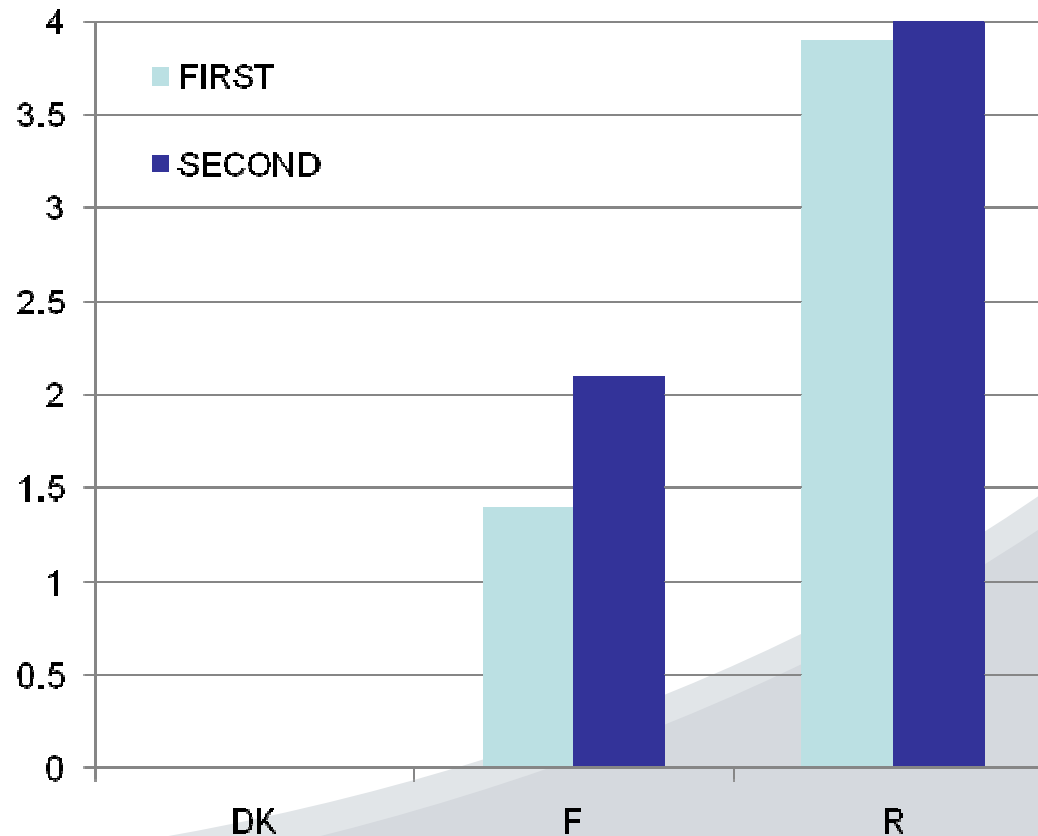

50 “keyframe” images reviewed – 2 months between viewings

Consistency of judgements (R / F / DK) ... Same judgement on 78% of memories

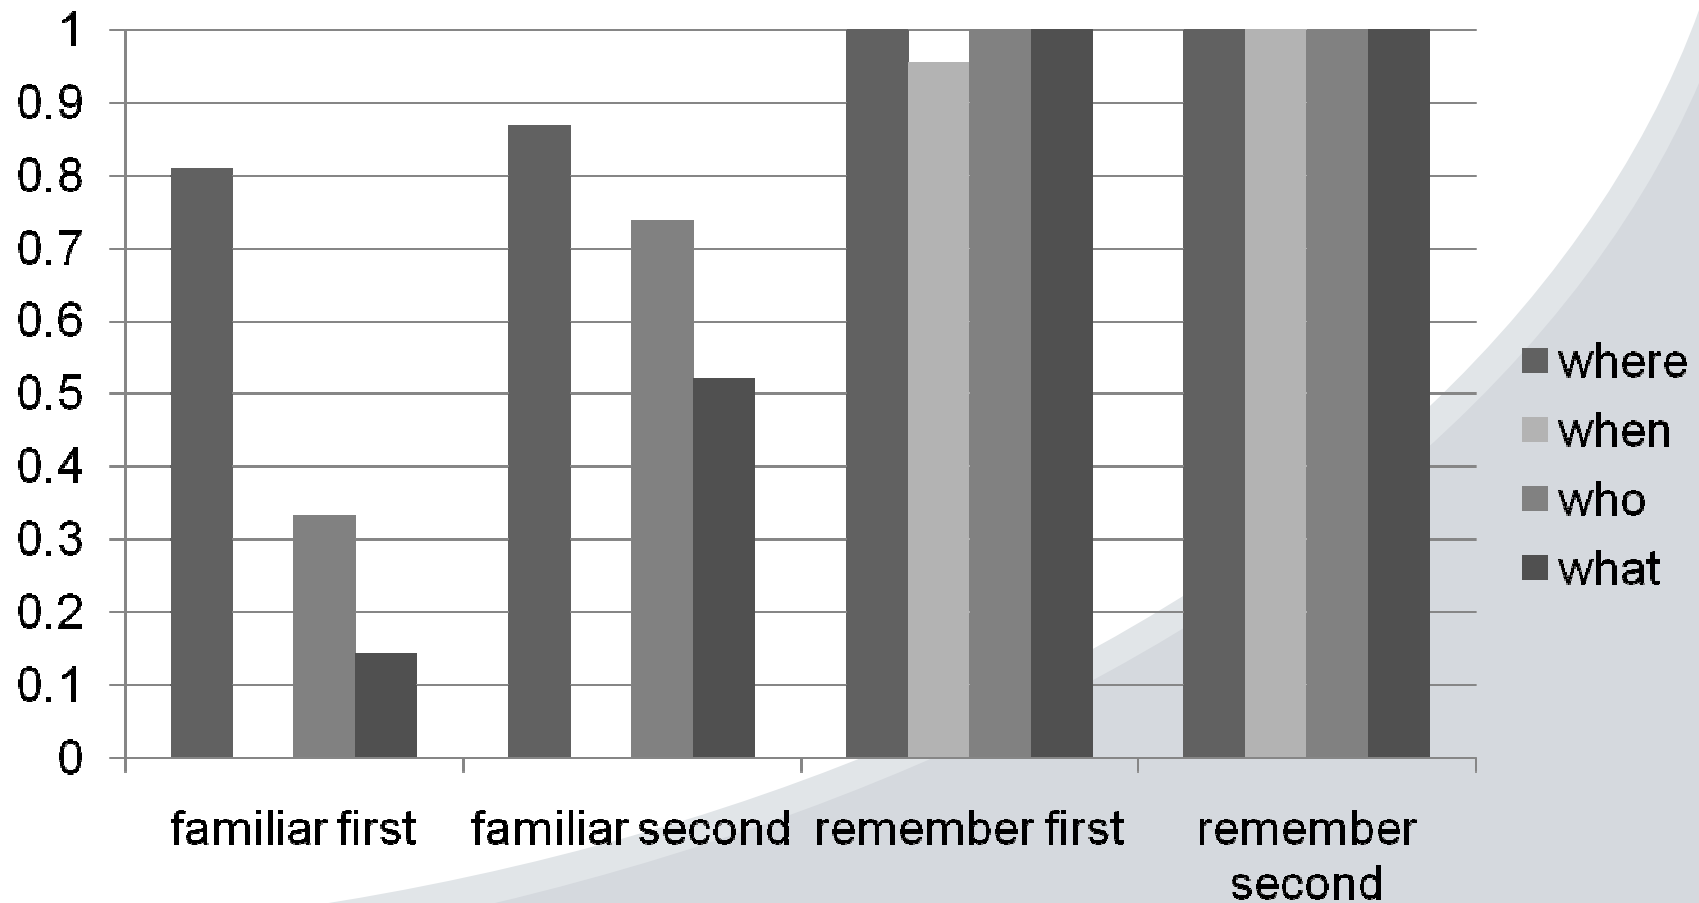

Episodic details 1

when / where / who / what

Episodic details 2

Next – Influence F-R shift

	R	F	DK
R	19	3	0
F	37	18	0
DK	3	0	2

- Working with SenseCam films instead of stills (using the same events)
- Working with surrounding events to provide further contextual information (to allow mind to storyboard)
- Change in recollective experience? F to R shift?

The SenseCam browser and human memory

Results so far

There is no considerable overlap between the most important browser events and those recalled by CG

$r = .17$

Spearman's rank correlation = .008

$p = .967$

novelty and personal relevance ratings given by CG on memories recalled by him and those generated by the browser

Novelty: 5.0 and 3.22 P.relevance: 4.0 and 3.0

t-test highly significant

Next?

Using user generated important events to help train system to improve...

How does user recollection of “free recall” memory change after being presented with SenseCam images of this memory...

Summary

- **More SenseCams**
 - we'd love 50+ of them!
- **Increased accuracy/flexibility in recognising a person's lifestyle**
 - More SenseCams = better recognition of lifestyle "norms"
- **Increased collaboration with memory experts e.g. as with Leeds**
 - we're good at summarising SenseCam data, but not at neuro psychology!
