# Overview: Research @ DCU

- **OUR SENSECAM DATA COLLECTION**
  - **CLARITY**
  - **Visual Lifelogging Analysis**
- BROWSING & SEARCHING SENSECAM DATA
- SENSECAM SUMMARISATION: THE NEXT GENERATION
- THE FUTURE

## CLARITY: Centre for Sensor Web Technologies

- CSET (Centre for Science Engineering & Technology) funded by Science Foundation Ireland (SFI) with industry contributions
- 5 year duration, following on from previous 4-year “Adaptive Information Cluster”
- Administrative centre in UCD, researchers in DCU, UCD and Tyndall Institute, up to 100 researchers;
- Within DCU involves Computing & EE, NCSR (sensor people), Health & Human Performance (sports people)

## CLARITY What ? “The Sensor Web”

- Increasing availability of cheap, robust, and deployable sensor technologies ushering in a wave of new information sources;
- Ubiquitous, dynamic, noisy, reactive and yielding unstructured data-streams == sensor web
- Need a large-scale, multi-disciplinary research effort == CLARITY
- Moves us beyond our research silos to novel research interactions;
- Demonstrator projects in:
  - TennisSense (and other sports); Environmental monitoring;**
  - Karbon footprinting; Ambient Assisted Living;**

## Principal Investigators

|                             |  |
|-----------------------------|--|
| Prof. Barry Smyth           | - <i>Personalization, recommender systems, mobile computing</i>    |
| <b>Prof. Alan Smeaton</b>   | - <i>Content-based information retrieval</i>                       |
| <b>Prof. Dermot Diamond</b> | - <i>Materials research, wearable sensors</i>                      |
| <b>Prof. Noel O'Connor</b>  | - <i>Audio-visual analysis, multi-modal information processing</i> |
| Mr. Gregory O'Hare          | - <i>Ubiquitous computing, multi-agent systems</i>                 |

## Associate PIs

|                          |  |
|--------------------------|--|
| Prof. Paddy Nixon        | - <i>Pervasive computing, middleware, security, trust, privacy</i> |
| <b>Prof. Niall Moyna</b> | - <i>Sports Science, wearable sensing</i>                          |
| Dr. Simon Dobson         | - <i>Middleware, pervasive computing</i>                           |
| Dr. Cian O'Mathuna       | - <i>Sensor devices, energy-aware hardware</i>                     |
| Dr. Brian Caulfield      | - <i>Physiotherapy, therapeutic gaming, wearable sensors</i>       |

## Funded Collaborators

Chris Bleakley (UCD), **Conor Brennan (DCU)**, Rem Collier (UCD), **Brian Corcoran (DCU)**, **Cathal Gurrin (DCU)**, Neil Hurley (UCD), Lorraine McGinty (UCD), **Kieran Moran (DCU)**, **Kieran Nolan (DCU)**, Brendan O'Flynn (TNI), **Donal O'Gorman (DCU)**, **Brett Paull (DCU)**, Emanuel Popovici (TNI), Aaron Quigley (UCD), **Mark Roantree (DCU)**

# Lifelogging

**Lifelogging is about digitally recording your daily life**

**Sometimes its for a reason**

**Work e.g. security personnel, medical staff, etc.**

**Personal e.g. diaries, etc.**

**Sometimes its for posterity**

**Recording vacations, family gatherings, social occasions**

**Sometimes its because we can**

# Visual Lifelogging Devices

Much past research focus on miniaturising hardware and increasing battery-life + storage e.g. visual lifelogging domain

Steve Mann. Wearable computing: a first step toward personal imaging. *Computer*, 30:25–32, Feb 1997.

TIMELINE

Tano *et. al.* University of Electro-Communications, Tokyo, Japan

Microsoft Research  
SenseCam

# SC data: c.3.5M SenseCam Images

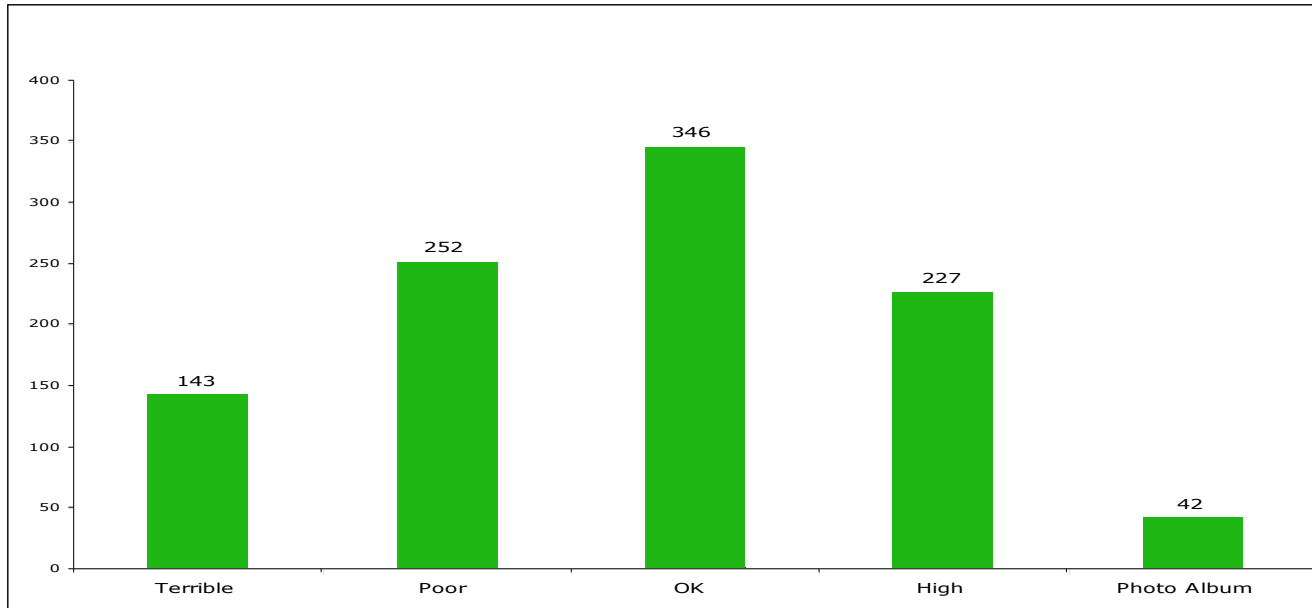

- **One user wears SC for almost 3 years, all day**
  - Each with GPS position
  - Ongoing collaboration with Univ. Of Leeds Dept. of Psychology
- **Experiences:**
  - Most people don't notice camera
  - Those that do always remember !
  - Most people don't mind the camera
  - Have been spotted/greeted by people who have heard about the 'guy with the camera'

# Summary Experiences

- Event browsing is key
  - Too many photos to browse, need event summary and then ‘drill down’ to view event in detail if required
- Stop events, (like work desk and driving) should be identified and hidden.
- ‘Total Recall’, little sign of ‘Event Decay’
  - Remembers nearly every (non stop-) event when presented again
  - Experiment underway exploring this
- Observations from three years suggest that many users want to get access to Lifelogging technology.

# SC Image Quality Analysis

- 40% of images are of low quality

- Many “boring” images of mundane tasks

Over years we’ve developed techniques for SenseCam data management, without having much user input or direction ...

... so our work is mostly technologically-driven rather than based on user pull ... lets look at it !

# Overview

- OUR SENSECAM DATA COLLECTION
- **BROWSING & SEARCHING SENSECAM DATA**
  - **Event Segmentation/Searching/Interest/Augmentation**
  - **Browsing Application**
- SENSECAM SUMMARISATION: THE NEXT GENERATION
- THE FUTURE

# Our Take ...

4 key points ... to effectively provide memory retrieval cues using SENSECAM we need to automatically:

- *Group similar images into distinct “events”*
- *Suggest more “interesting/distinctive” events*
- *“Associate” related events*
- *Provide potentially additional retrieval cues from other sources*

# Daily Browser Overview

SenseCam Images of a day (about 3,000)

Event Segmentation

## EVENT SEGMENTATION

Using MOTION sensors – very quick & accurate

# Visual Search Facilities

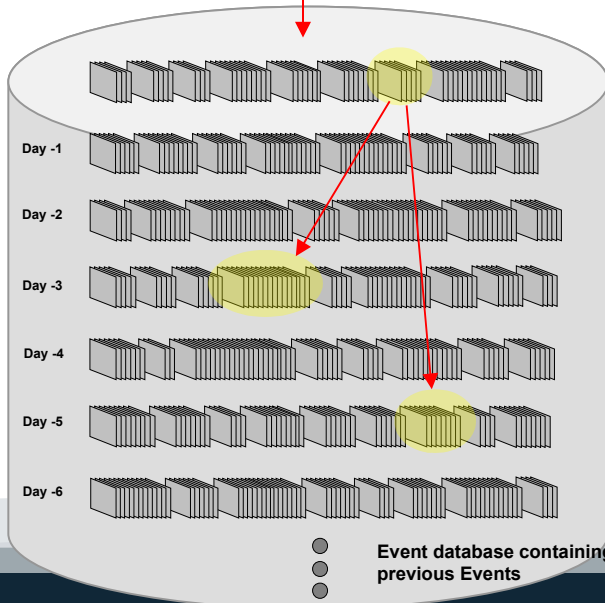

SenseCam Images of a day (about 3,000)

Event Segmentation

Event-Event Comparison  
within the Multi-day Event  
database

# Selecting Event “Keyframe”

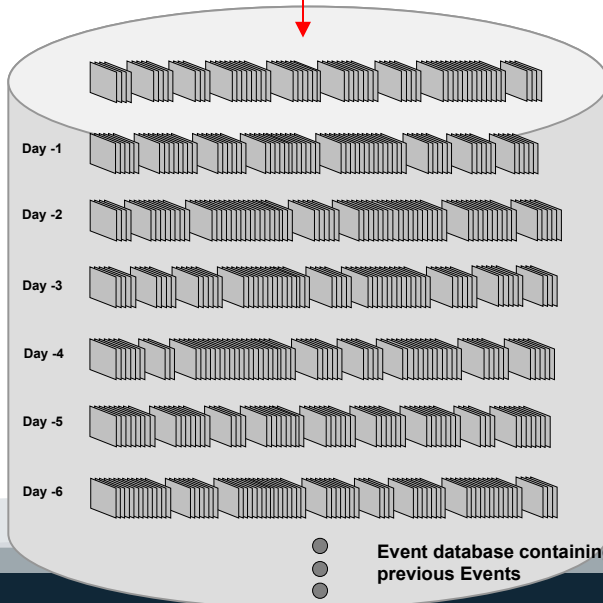

SenseCam Images of a day (about 3,000)

Event Segmentation

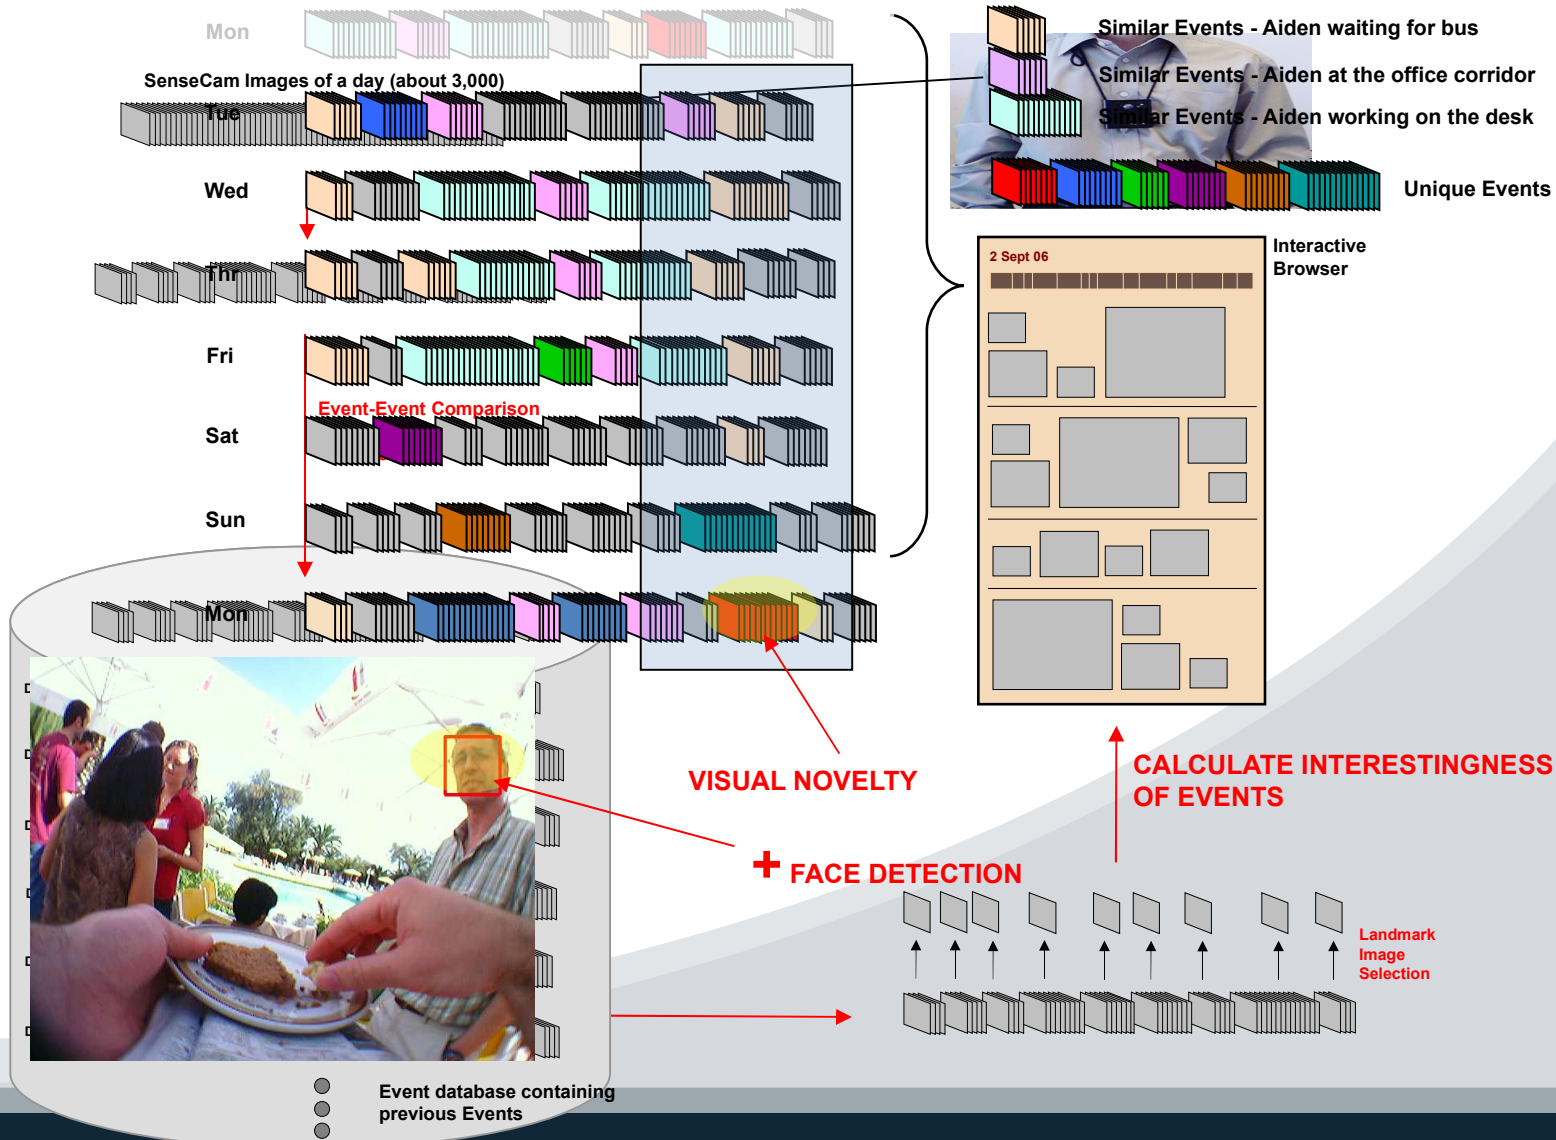

Event-Event Comparison  
within the Multi-day Event  
database

Best QUALITY  
image around  
MIDDLE of event

# Suggest Interesting Events

# Event augmentation

Here's a SenseCam picture of Aiden at a pier in Santa Barbara, CA.

If he has GPS he can search for other pictures in the same location...

# Event augmentation – more cues

- He receives the following “geotagged” images...
- Then after some processing on text associated with these images we get many more images, and even YouTube videos at times too!
- And then ... visual filtering to choose those for SC event augmentation

# Event augmentation

**Does it work ?**

**Yes - we have it operational from 6 image sources,  
tested and evaluated with users.**

**Bringing the threads together ... event segmentation,  
KF selection, event importance, event searching,  
and event augmentation ...**

**... we have a system to manage a lifelog**

CALENDAR

# Released Software

The screenshot displays the CLARITY software interface. On the left, there is a calendar for 'joulukuu 2007' (December 2007) with dates 26, 27, 28, 29, 30, and 31. Below the calendar is a 'MORNING' timeline with time slots from 08:14 to 09:04. The main area shows an 'EVENT DETAIL' for the event '(09:29 - 09:34; duration: 4min; 22 images)'. Below the event title is a grid of 22 small image thumbnails. To the right of the event detail, there is a 'LOGOUT' button. The interface also shows a 'ma ti ke to pe la su' (Monday to Sunday) header and a 'Type in description of this event here' prompt.

## Features:

- Database – image management

This block shows a large grid of image thumbnails, likely representing the 'image management' feature. The thumbnails are arranged in a grid and show various scenes from the event, including computer monitors, people in a room, and other indoor settings. The text 'Quick "event segmentation" (1-2 seconds per folder)' is overlaid on the grid.

# Event Segmentation S/W

- Carnegie Mellon University
- CWI, Amsterdam
- Lulea University of Technology
- Oliver Zangwell Centre
- “Mrs. W.”
- University of Leeds
- University of Limerick
- University of Toronto
- University of Utrecht
- University of Illinois
- University of Tampere

# Gesture Recognition Interface

- Bring the Lifelog browsing experience into a lean-back environment
- Use the event segmentation to define a day, and allow user browsing at the event, day, week level...

We defined a suite of gestures that make sense :

- Next/previous event
- Next/Previous image
- Next/previous day, week, ...

Possibility of pivot view across multiple axes, e.g. People, locations...

User experiment planned

| 3   | 4   | 5   | 6   | 7   | 8   | 9   |

You should not eat that much sweets, fats and oils. Use them sparingly!  
Next time try to take less meat, fish, eggs or products in this group.  
Don't forget a bigger amount of vegetables next time!

**Breakfast:** Milk is important for our bones, you started your day with a perfect amount of milk!!

You can take as cereals and bread as you want, and they are perfect at breakfast!!

Fruit and vegetables are good for your health. You introduced it in your breakfast, well done!!

Come on! leave the sweets and food from meat group for lunch, or for dinner!!

**Lunch:** Remember that you can always have some milk derived product as dessert!

Lunch with bread...perfect!!

Great amount of fruit for lunch!!

You can introduce some vegetables in your lunch!!

Meat, fish and eggs. Proteins for your body, good lunch amount!

**Afternoon snack:** Remember: afternoon snack has to be light. Try with a piece of fruit or some yummy...

**Dinner:** Milk is important for our bones, you can take some milk derived product for Dinner!!

Dinner with bread...perfect!!

## WEDNESDAY 17 OCT 2008

This day's food intake is as following:

4 Meals

**2,118 Calories**

Select a meal to annotate and/or see the type of food eaten for that meal

Detected 'eating' events listed, for the

This re-calculates the overall calorie-exercise balance and displays on the screen

**Meal 1**  
10:47am

My total calorie balance for each day over time...

**Meal 2**  
1:20pm

243 Calories

**Meal 3**  
3:15pm

80 Calories

**Meal 4**  
8:08pm

845 Calories

# Advanced Image Matching

Bi-directional Match Verification & re-ranking of Top results

# Setting Detection – Watching TV

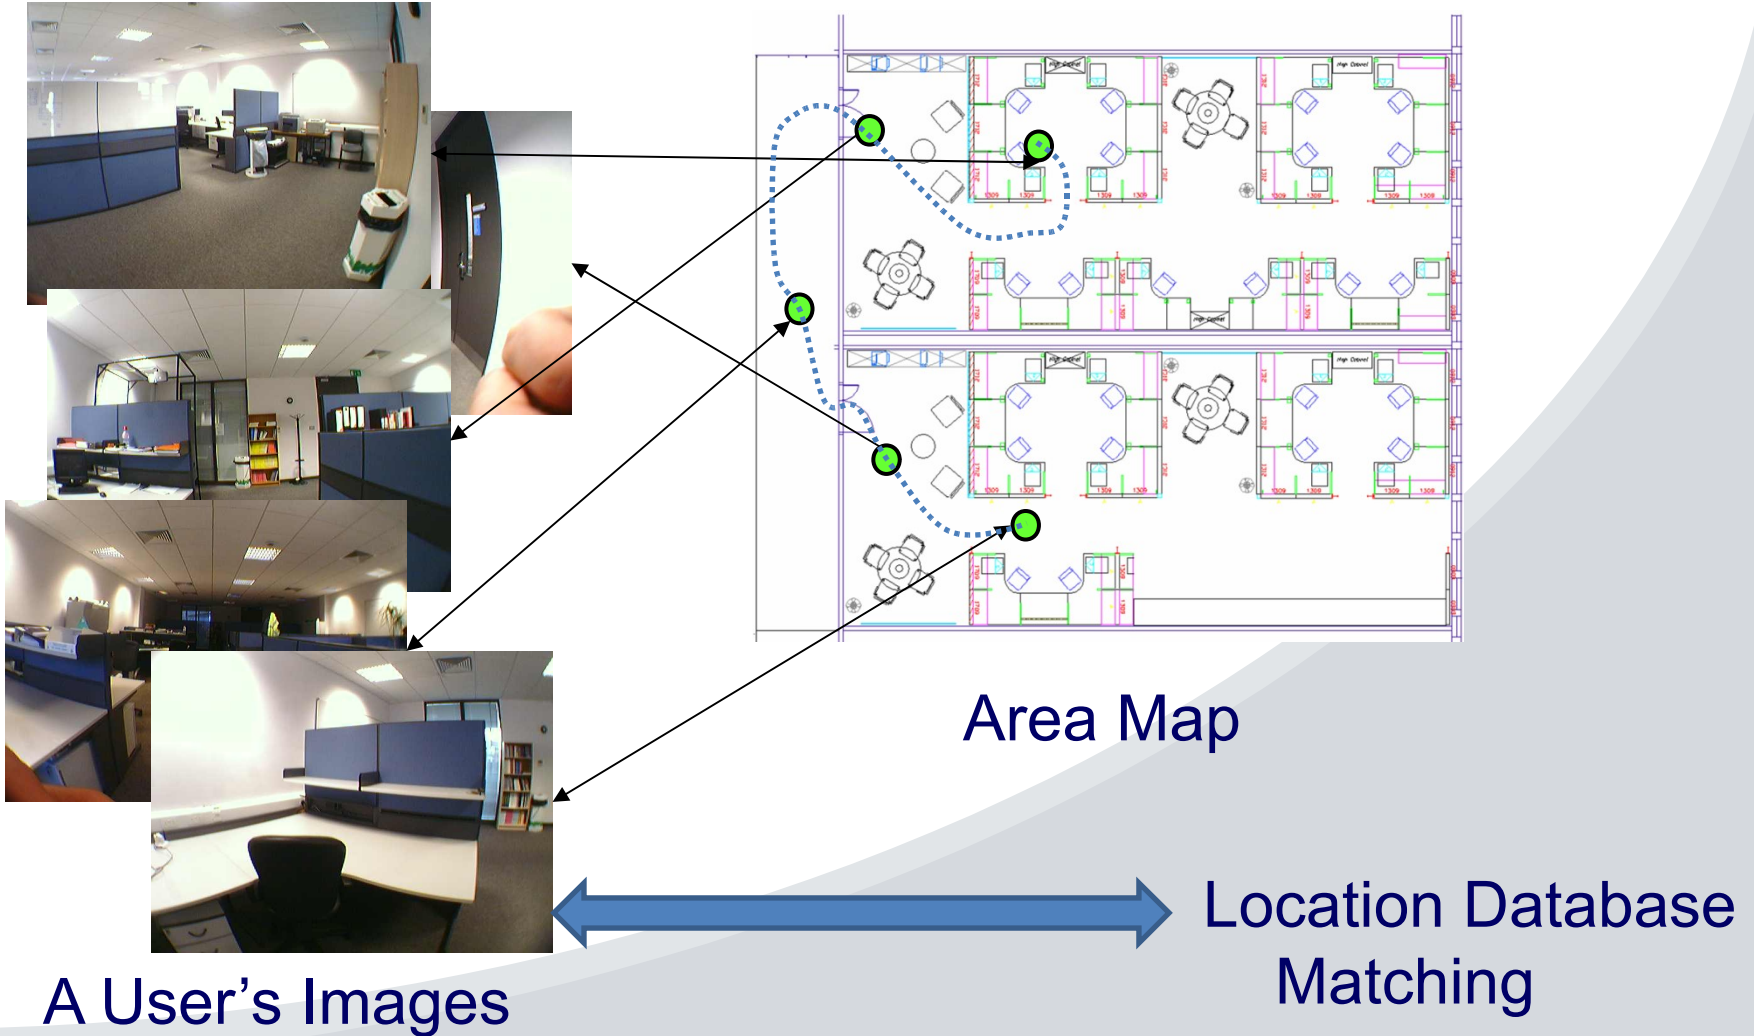

# Setting Detection – In the Park

# Trajectory Estimation

# Trajectory Estimation Results

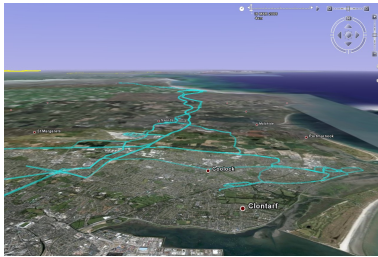

Ground  
truth

Accuracy ~1.5 meters

# Combining Data Sources

**SENSECAM:** Images

**GPS:** Location

**PC:** E-mail, web pages visited, documents worked on

**PHYSIOLOGICAL:** Heart Rate, body temperature, breathing rate, sweat pH analysis

**PHYSIOLOGICAL:** Posture monitoring

**BLUETOOTH:** People around me + FAMILIARITY

# Using Context in Personal Information Management

- Represent events as text documents, then “Google” them
- Search using keywords to find the desired target (e.g. pics of SenseCam event):
  - You may recall:
    - This document was for the *Conference X*.
    - I worked on it before meeting with *Professor A*.
    - It was a hot day
    - I was really tired
    - It was some restaurant in the city centre where we met

# iCLIPS Browsing Interface

Present landmarks: real life events (Photos) and computer activities (Keywords and Thumbnails)

Refine searching by RECOGNIZING landmarks and Estimating the relevant Temporal distance from the Targets to the landmarks

Traditional Searching Panel also provide rich searching options:

- Keywords
- Target type
- Flexible time/date
- Geo-location
- People
- And more...

The screenshot displays the iCLIPS Browsing Interface, a search tool for digital world activities. The interface is divided into several sections:

- Traditional Searching Panel:** Located on the left, it includes a 'Keywords' input field, a 'filetype' dropdown menu (set to 'documents'), a 'Date of accessing' section with a date picker (set to 11/26/2008) and a calendar view, and a 'real life context' section with a 'location' input field (set to 'Dublin') and a 'people' dropdown menu (set to 'Ann').
- Search Timeline:** A horizontal timeline at the top shows various landmarks and activities, including '2008 May', 'SSMS', 'FDIA', and 'Diary'. Below the timeline, a 'TIMELINE' section lists categories like 'False Memory', 'sensecam', 'model', 'Autobiographical memory', 'Survey.xls', 'C/W', 'active window', 'Flex', and 'Diary'.
- Real Life Events:** A row of five photo thumbnails is shown at the top right, with a 'Real Life Events' label and a list of checkboxes: 'Photos', 'Calander events', 'File Thumbnails', and 'Periodical Keywords'.
- Digital world activities:** A large 'RESULT PANEL' at the bottom displays a grid of document thumbnails, including 'stimulating episodic with SenseCam.pdf', 'survey (version 1) (version 1).xls', 'sv-lncs.dot', 'sv.doc', 'iiiX', 'Titlasde.doc', 'This survey explorer.doc', 'Yukicontextquestionair.xls', and 'typeinst\_poster.doc'. A 'More Info' popup is visible over the 'iiiX' document, showing details like 'Subject: FDIA', 'Summary: Time has long been sigir.xls considered as a useful attribute in desktop information retrieval (e', 'Authors: YI CHEN', and 'Last opened: Sunday 15 March 2009 11:52'.

# Overview

- BROWSING & SEARCHING SENSECAM DATA
- SENSECAM SUMMARISATION: THE NEXT GENERATION
- **THE FUTURE**
  - Storytelling
  - Energy Consumption
  - Designing for the Elderly
  - Summary

# Lifelogs & Storytelling

Lifelogs offer huge opportunity for telling life stories.

Need for Narrative:

1. Humans like stories - we tell them everyday
2. Lifelogs are complex & voluminous - we can't just present the material - we need to tame it somehow
3. Story form communicates experience effectively & enables reflection and introspection

# Lifelogs & Storytelling

One project is on building 'stories' from a lifelog

1. What components of a lifelog should be used in the composition of digital life stories and how should they be structured to enable retelling?
1. What information should be captured about the relationships between the various story elements in order to facilitate the reasoning required to build the end narrative?
1. How should an author be supported in the process of composing a life story and how should these stories be presented to their intended audience?

# Designing for Older Adults

| Areas Affected by Ageing               | Implications for Design   |
|--|---|
| Cognitive Skills -<br>Working Memory   | Providing feedback to show what has been selected.<br><br>Use combination of text and icons to support recall.                |
| Sensory Skills -<br>Vision and Hearing | Use of large images and text, large target areas for buttons and high colour contrast. Use of low frequency auditory signals. |
| Psychomotor skills                     | Use direct input devices (touch screen). Reduce scrolling.  |

# Summary

- **More SenseCams**
  - we'd love more
- **Increased accuracy/flexibility in recognising a person's lifestyle**
  - More SenseCam data = better recognition of lifestyle "norms"
- **Increased collaboration with memory experts e.g. as with Leeds**
  - we're good at processing SenseCam data, but not at explaining why

# Managing a Life of Lifelogged SenseCam Images
